Department of Computer Science
Fall 2021

[FAST CO-CURRICULAR SOCIETIES MANAGEMENT SYSTEM]

ABSTRACT IDEA:

The Idea is to create a software application that manages the co-curricular societies working in NUCES FAST. The application will help the student, faculty, or visitor to get a general idea about how the societies are working and what type of events are being held. Furthermore, the application will help students to apply to various societies for membership. It will not only be beneficial for students but also for the societies as they can get applicants and can also effectively scan out the better candidates.

OBJECTIVES:

- Account registry
- Allocation of accessibility to different accounts (example, Personal accounts can be updated by the people personally, Society head can update info regarding their society, etc.)
- Information Regarding Past Events
- Information Regarding Ongoing Events
- Information Regarding Future Events
- Calendar (to display important dates)
- Notifications (to notify users about upcoming events and deadlines.)
- Registration process for students to apply for society's membership
- Evaluation of the applicants on the basis of information provided by applicants (It will help faculty/Society managers in considering who should be the best candidate)

GROUP MEMBERS:

Shaheer Luqman	21k-4655
Rukhshan Khan	21k-4663
Saad Rehman	21k-3322
